# 第10讲 Git Visual Studio Code 结合 M 使用

# 配置 VScode 中的 git

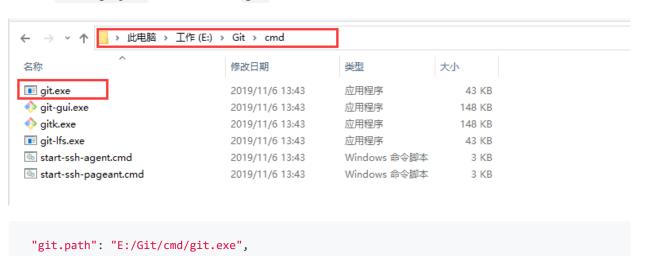

1. 打开 vScode, 依次点击下图中的地方。

2. 在输入框中输入 git.path , 再点击第二个地方, 打开 settings.json 。

3. 在 settings.json 文件中,添加 git 的安装路径。

```
| State | See | Control |
```

4. 然后关闭 VScode ,再次打开,添加 Git 图标。

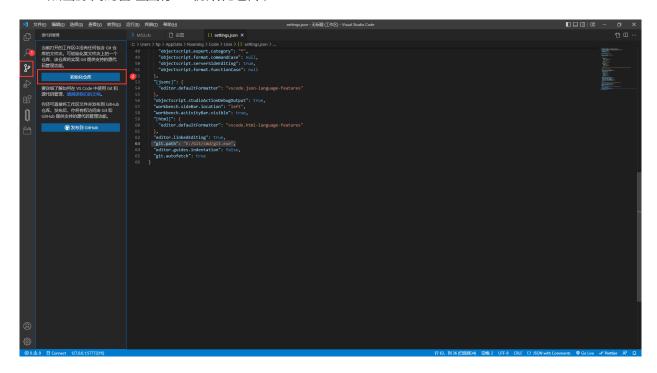

```

# 初始化本地库

1. 点击源代码管理图标 > 初始化仓库。

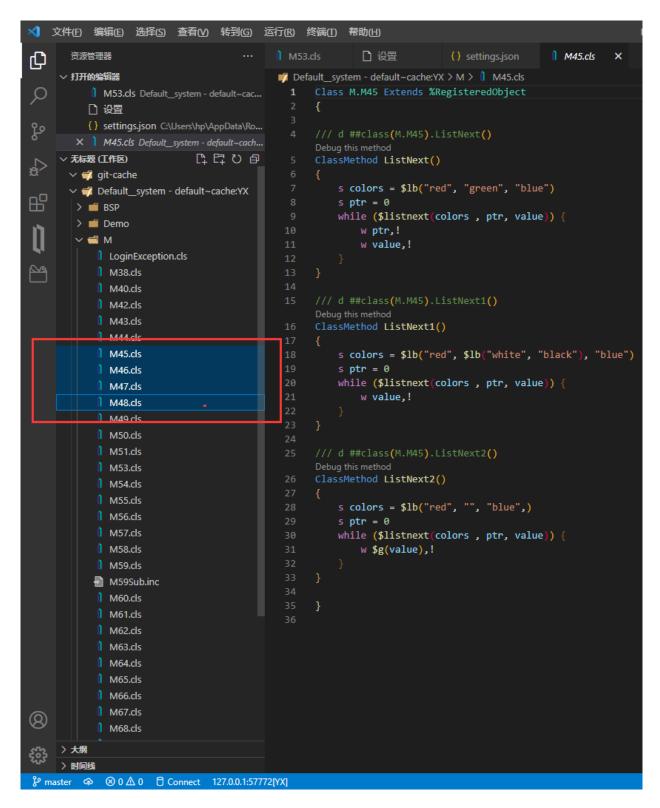

2. 选择要初始化仓库的文件夹。

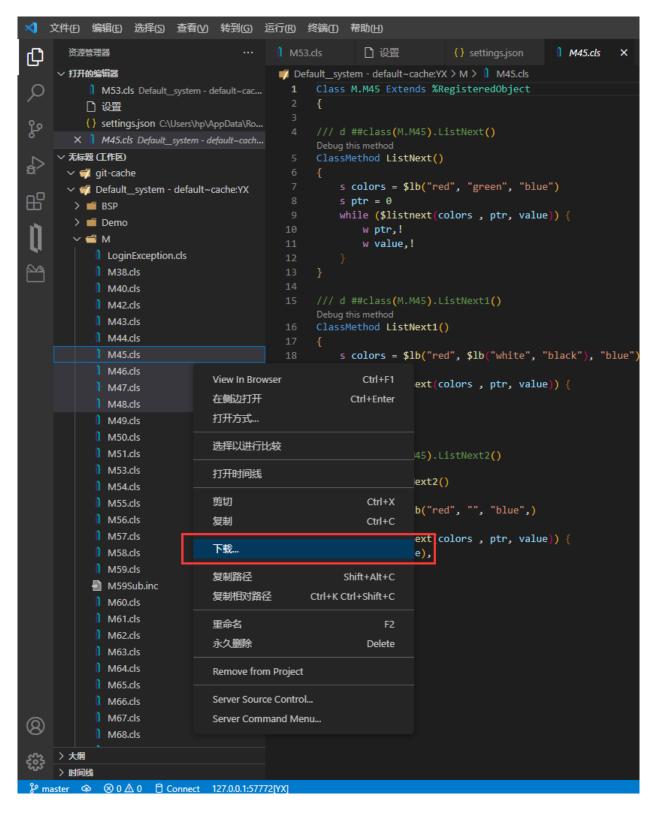

## 提交本地库

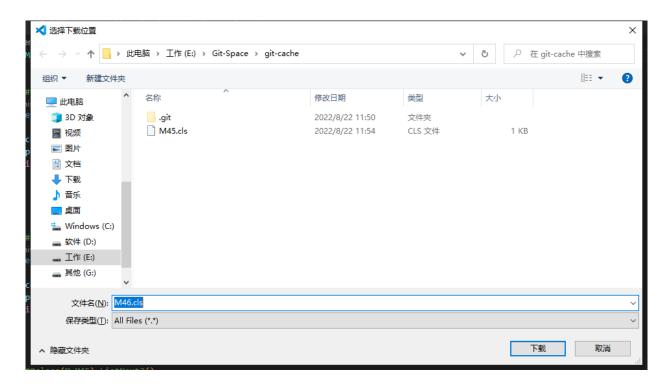

- 1. 选择要提交的文件。
- 可以多选。

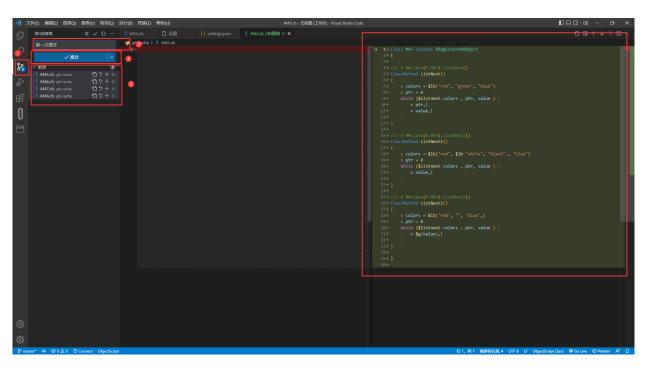

2. 右键 > 下载。

3. 进行保存。

4. 点击源代码管理图标 > 选择要提交的代码 > 提交描述 > 提交。

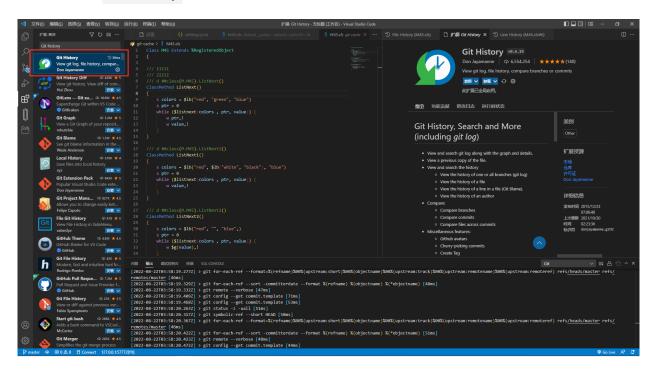

• 警告信息,因为没有添加暂存区,直接提交,忽略。

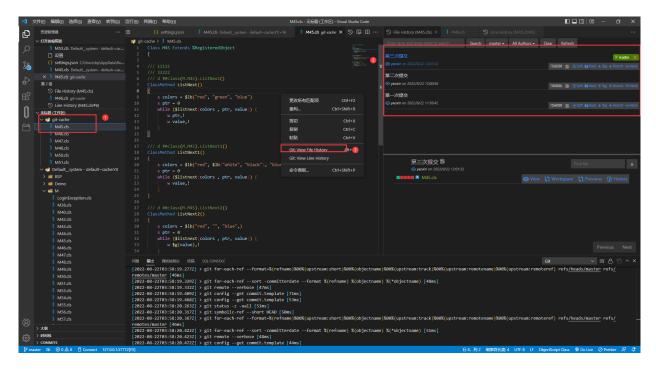

```
15+ /// d ##class(
                                            16+ ClassMethod Li
                                                    s colors =
                                            18+
Visual Studio Code
                                                   s ptr = 0
                                                   while ($li
     没有可提交的暂存更改。
                                                       w valu

                                            25+ /// d ##class(
                                            26+ ClassMethod Li
                                            28+ s colors =
```

### 查看版本

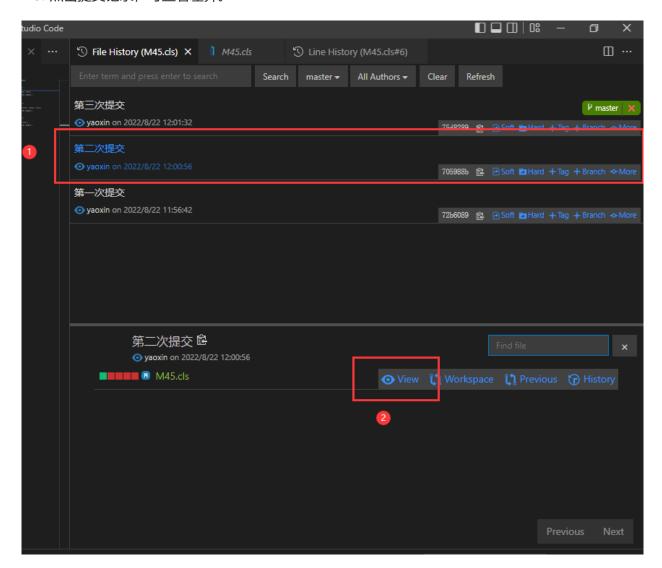

1. 安装插件 Git History 。

2. 选中要查看版本的文件。

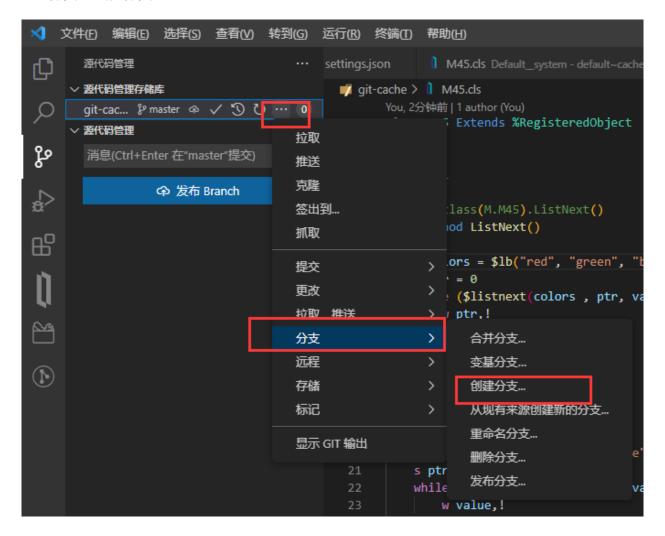

3. 点击提交记录,可查看差异。

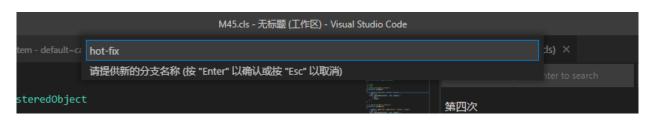

### 创建分支

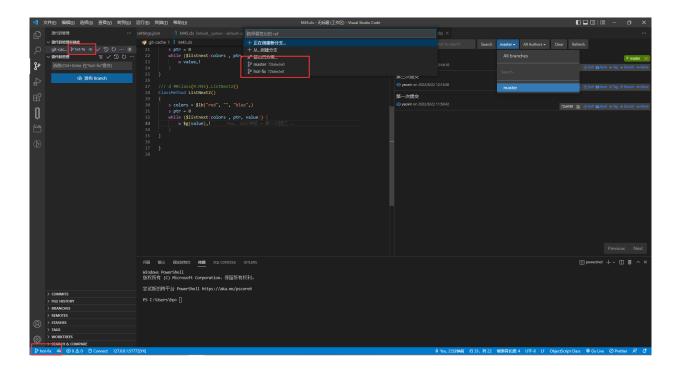

#### 1. 分支 > 创建分支。

2. 输入分支名,是否切换到分支。确定。

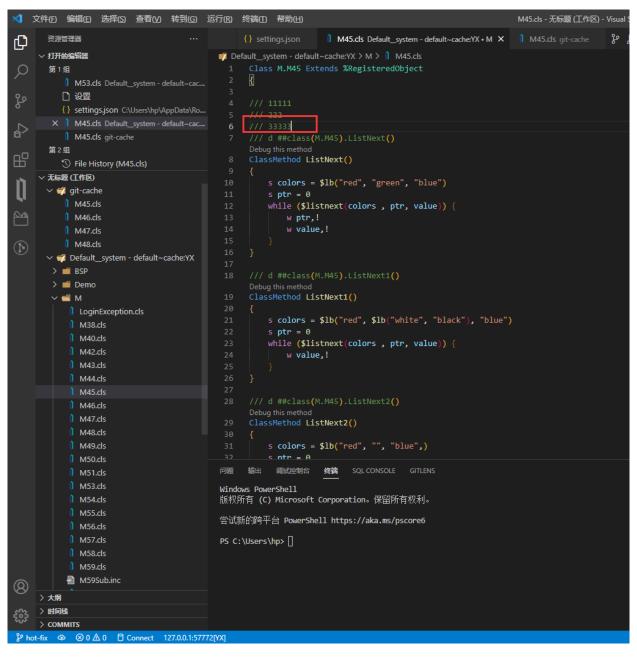

3. 切换回master分支。

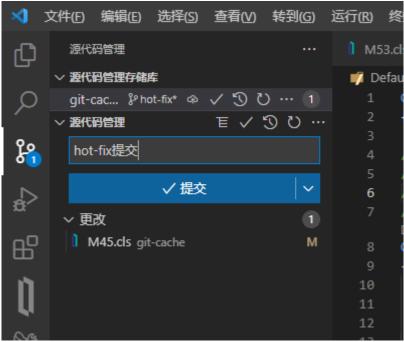

# 合并分支

### 正常合并

1. 切换回hot-fix分支,修改代码并提交。

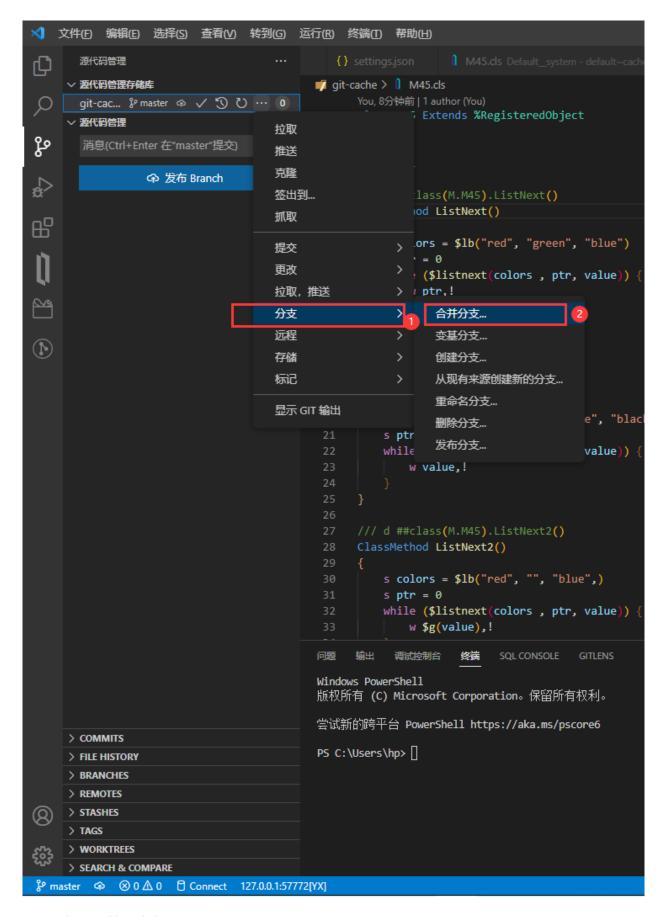

2. 切换回master分支。查看提交记录。

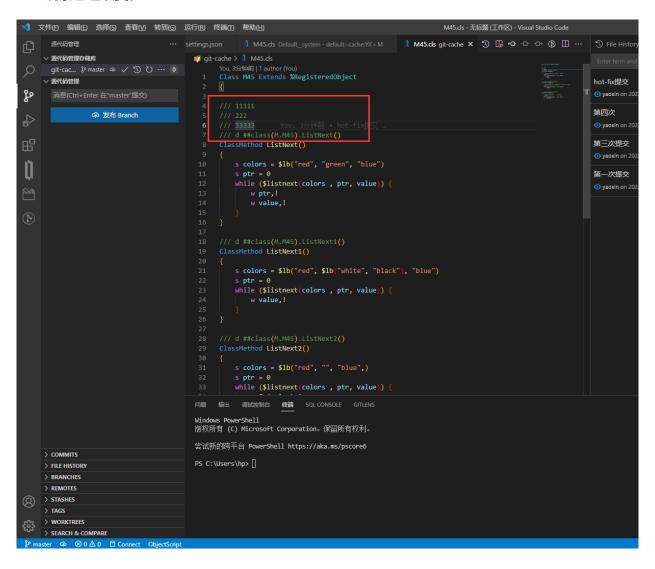

```
| 3 | March | Select | Select
```

#### 3. 合并分支。

• 选择要合并的分支。

4. 观察已经改变。

### 冲突合并

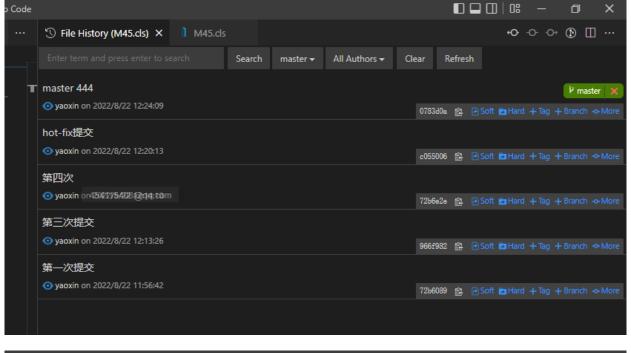

1. 创建 master 冲突。

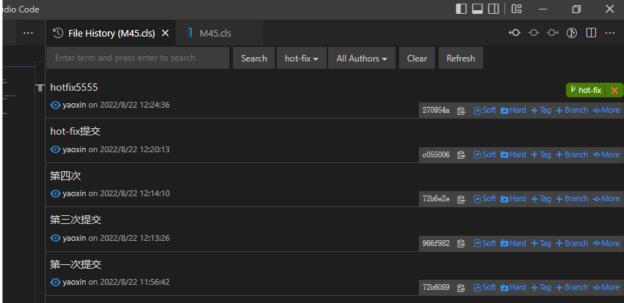

```
